

ANNOUNCEMENT FOR POWERLINE STEAM-HEATED DRYER

Steam Solenoid Valve Supply Revision Q4/2026

Subject: Revision of Standard Supply Scope for STEAM SOLENOID VALVE on STEAM-HEATED DRYERS

Dear Valued Customers, Distributors, and Business Partners,

Powerline Equipment Company would like to inform you of an update regarding the standard supply scope for Steam Solenoid Valves used with steam-heated tumble dryers.

As part of our ongoing review of product configuration and installation requirements, the **STEAM SOLENOID VALVE** will no longer be included as a standard supplied component with **STEAM-HEATED DRYERS** for new orders, effective from the Q4/2026.

This revision has been made to better align the equipment supply scope with actual installation practices and site-specific requirements.

In recent projects, we have observed that steam installation conditions may vary considerably from one site to another. These differences may include steam pressure, piping configuration, valve type, connection size, installation layout, control requirements, local engineering standards, and the preferred brand or specification selected by the customer or installation contractor.

In addition, the use of the originally supplied Steam Solenoid Valve has become less common in many projects, as customers and contractors increasingly select valves according to their own steam system design, project specification, or local installation standard.

For this reason, the Steam Solenoid Valve will be treated as part of the installation scope / optional accessory rather than as a standard component supplied with the machine. This approach provides greater flexibility and allows the most suitable valve specification to be selected according to the actual site conditions and installation requirements.

However, should a customer require us to supply the Steam Solenoid Valve together with the machine, the item remains available for purchase. In such cases, please specify the requirement and add the Steam Solenoid Valve as an Optional Feature / Optional Accessory in the quotation or purchase order.

We appreciate your kind understanding and continued cooperation. Powerline Equipment Company remains committed to providing practical product configurations and installation support that are suitable for the actual requirements of each project.

Sincerely,

Powerline Equipment Company
